

User Management Screen

Requirements

This screen is intended for managing user data within the system. The following requirements should be taken into account:

- The screen should display a list of all users.
- Users can be filtered by name or email.
- It should be possible to add a new user.
- It should be possible to edit and delete existing users.
- The user should be able to sort the list of users by name or email.

UI Components

The following UI components should be used:

- A table to display the list of users, with columns for name, email, and status (edit and delete).
- A form to add a new user, with fields for name, phone, email, roles and status.
- A dialog box to edit user data, with fields for name, email and status.
- A confirmation dialog box when deleting a user.

Page Behavior

- When the page loads, it should display the full list of users in alphabetical order by name.
- The user should be able to search for a user by name or email by filtering .
- The user should be able to add a new user by clicking on an "New User" button that opens a form.
- When the user clicks on the "Edit" button for a user, a dialog box should open with the current data for that user. The user can then edit the data and save it.

Initial Display

The initial display of the page should include the following:

- A table displaying the list of users in alphabetical order by name, with columns for name, email, and status (edit and delete).
- A box to filter the list of users by name or email.
- An "New User" button to add a new user.

Mockup

I could not find a suitable mockup for this user interface.
